

Rubber Chicken Bones

By Dr. David Menton

Materials

- vinegar
- clean, dry chicken bones (leg bones work best)
- plastic cup deep enough to hold the bones

Directions

1. Place the chicken bones in the cup and pour in enough vinegar to cover them completely.
2. Let them soak in the vinegar for at least 24 hours—the longer they soak the more pliable they become.
3. After 24-hours remove the bones and see how they've changed! They will be very flexible and bendy—in fact you can even tie them in knots.
4. When you have tied a few let them dry out overnight and they will harden up in the position you left them—like little sculptures!
